Testing flows that can be automated

1. In each business metrics summary, the numerical change in gross revenue and new profit should be in green with a green upward arrow if the number increased, red with a red downward arrow if the number decreased, or gray if the number did not change.
2. The table rows should be sortable by each column (product, reviews, price, fee, inventory, today, YDA, 7D, 30D, this week, this month, stock, and FBA).
3. While a user hovers (or holds finger down, if on mobile) over a table row, that table row's background will change purple.
4. While a user hovers (or holds finger down, if on mobile) on a product image, an overlay should display a larger version of the product image.
5. A product's review column should display its numeric review rating between 0 and 5, which is also shown as a row of empty, filled-in, or half-filled in stars, depending on the rating (rounded to the nearest half).
6. In a product's Fee column, there should be an icon next to the Fee that, when hovered on (or holds finger down, if on mobile), displays an overlay with the breakdown of the charges.
7. In a product's Fee column, there should be a size tier label that, when hovered on (or holds finger down, if on mobile), displays a product's size, weight, and size tier.
8. In a product's Inventory column, there should be an FBA (Fulfilled By Amazon) label that, when hovered on (or holds finger down, if on mobile), displays a summary of the Amazon Fulfilled Quantity information.
9. In the Amazon Fulfilled Quantity summary, the fulfilled quantity total should be equal to the sum of available, transfer, inbound, unfulfillable, and researching metrics.
10. In the Amazon Fulfilled Quantity summary, the unfulfilled quantity total should be equal to the sum of the customer damaged and the defective metrics.
11. In a product's Inventory column, there should be an icon next to the 3PL (third-party logistics) label that, when hovered on, displays an overlay with the name of the 3PL company and a summary of the number of inbound, outbound, and total orders.
12. In the product's "YDA" and "7D" columns, an increase compared to the last week should display a green arrow pointing upward, and a decrease should display a red arrow pointing downward.
13. In the product's "YDA" and "7D" columns, the average between the current and previous week, rounded to the nearest digit, should be displayed next to the "Avg" label.
14. In the product's Stock column, the number should be white text inside of a red box if it is below a specified number (I assume that the number is between 15 and 26); otherwise, it should be black text with no background.
15. In the product's FBA column, the "Suggested" number will be green if 0 and red if not 0.
